# Rogue Wave Software
# Visualization for Java product family
# Version 8.10

## System Requirements

This guide gets you started with a typical installation for Rogue Wave Visualization products.

### Supported Platforms

The Rogue Wave Visualization for Java product family is supported on the following platforms:

- Linux
- Windows
- Mac OS X

On each platform, the product compatibility with the main browsers have been certified:
- Firefox 38
- Chrome 43
- Internet Explorer 11
- Microsoft Edge
- Safari 8

The products have been compiled using Java 6 and have been certified against the three latest Java releases: 6, 7, and 8.
The installation includes an Apache Tomcat 7 server.

### Windows

All Windows versions from 7 upwards are supported.

The platform chipset of choice is 64-bits.

The minimum recommended RAM amount is 4GB but 8GB is preferred.

Upon installation, the amount of disk space depends on the product. For example, installing JViews Enterprise requires 2.2GB. An equivalent amount of temporary disk space is required during installation.

### Linux

Red Hat versions 5 and newer are the Linux platforms of choice.

The chipset of choice is 64-bits.

The minimum recommended RAM amount is 4GB but 8GB is preferred.

Upon installation, the amount of disk space depends on the product. For example, installing JViews Enterprise requires 2.2GB. An equivalent amount of temporary disk space is required during installation.

## Mac OS X

The supported system is Mac OS X 10 (Yosemite) and later.

The chipset of choice is 64-bits.

The minimum recommended RAM amount is 4GB but 8GB is preferred.

Upon installation, the amount of disk space depends on the product. For example, installing JViews Enterprise requires 2.2GB.

The Safari browser is supported only on this platform.
