### Legend

-  - Supported Platform
- bold** - New since last release

PV-WAVE 2023.2 is a limited platform release for Red Hat Enterprise Linux 8. Users on other platforms should continue using PV-WAVE 2023.1

PV-WAVE is certified against these platforms, but is expected to work with any binary-compatible operating systems (for example CentOS claims binary compatibility with Red Hat Enterprise Linux).

PV-WAVE may work on similar platforms, but will be supported on a best-effort basis only
